

AASHTOWare Bridge Rating and Design Training

PS8 – Prestressed I Beam Thicker Web (BrR/BrD 6.4)

This example describes how to define thicker web of prestressed I girder stem near the support. This example assumes you have access to Example7 (BID10) in the teaching database from the installation.

Topics Covered

- How to define thicker webs near support for prestressed I girder
- Compare prestressed I girder ratings between with and without thicker web definitions

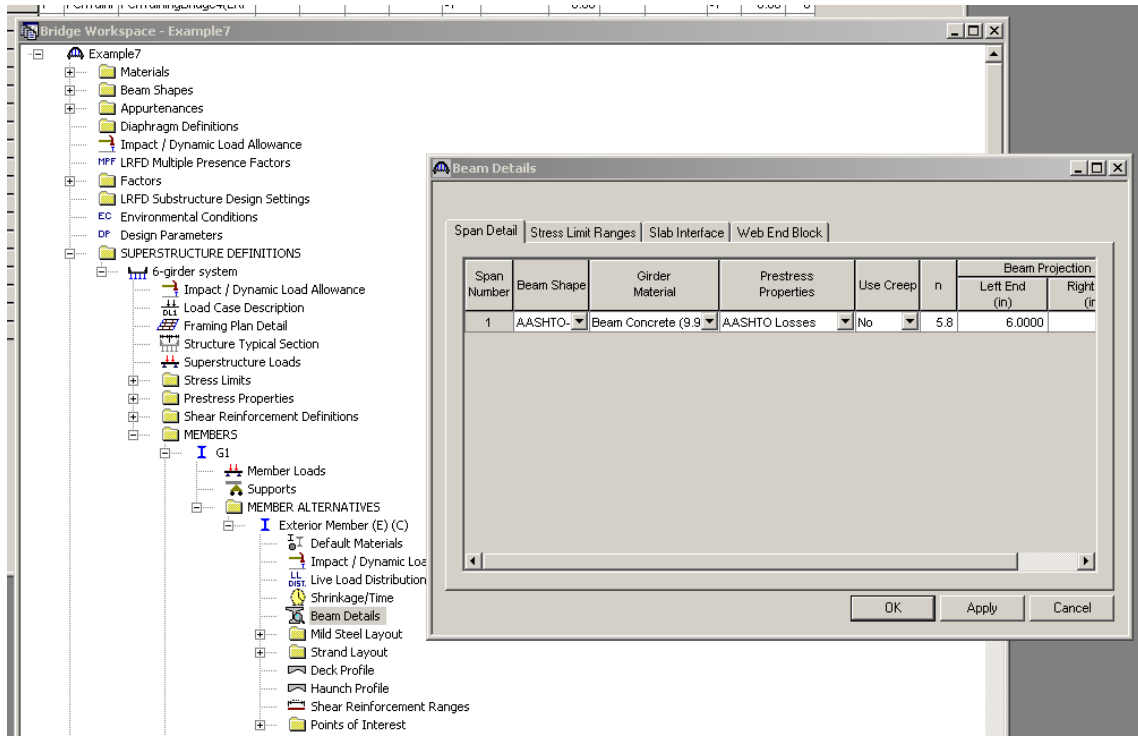

Open bridge Example7, rate girder G1 with an HS20 vehicle using Load Factor Design. Rating results are shown below:

Live Load	Live Load Type	Rating Method	Inventory Load Rating (Ton)	Operating Load Rating (Ton)	Inventory Rating Factor	Operating Rating Factor	Inventory Location (ft)	Inventory Location Span-(%)	Operating Location (ft)	Operating Location Span-(%)	Inventory Limit State	
HS 20-44	Lane	LFD	57.29	95.68	1.591	2.658	120.00	1 - (100.0)	120.00	1 - (100.0)	Design Shear - Concrete	Design
HS 20-44	Axle Load	LFD	54.78	91.48	1.522	2.541	120.00	1 - (100.0)	120.00	1 - (100.0)	Design Shear - Concrete	Design

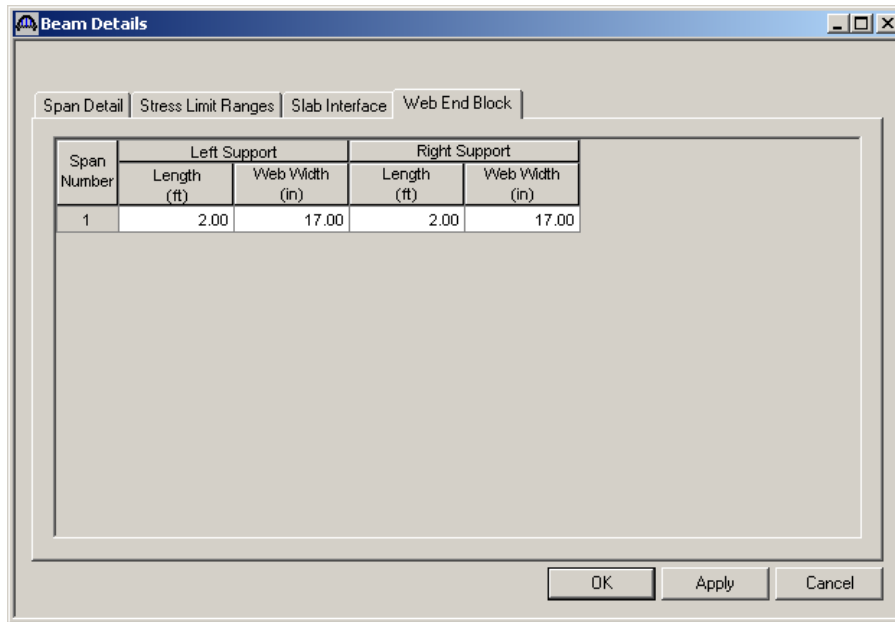

AASHTO LFR Engine Version 6.4.0.2003
Analysis Preference Setting: None

The rating is controlled by concrete design shear at right support.

To define thicker web at the supports, open Beam Details window of Girder G1.

Click Web End Block tab to enter thicker web information as below.

Click OK to save the change to memory and close the window.

The results for rating an HS20 vehicle using Load Factor Design are shown below:

Live Load	Live Load Type	Rating Method	Inventory Load Rating (Ton)	Operating Load Rating (Ton)	Inventory Rating Factor	Operating Rating Factor	Inventory Location (ft)	Inventory Location Span-(%)	Operating Location (ft)	Operating Location Span-(%)	Inventory Limit State	
HS 20-44	Lane	LFD	61.64	111.63	1.712	3.101	60.00	1 - (50.0)	3.33	1 - (2.8)	PS Tensile Stress - Concrete	Design
HS 20-44	Axle Load	LFD	55.47	106.73	1.541	2.965	60.00	1 - (50.0)	3.33	1 - (2.8)	PS Tensile Stress - Concrete	Design

AASHTO LFR Engine Version 6.4.0.2003
Analysis Preference Setting: None

After defining thicker web at supports of G1, rating is controlled by PS tensile stress at mid span.

Click “View Spec Check”  button to view article list.

Specification Reference	Status
68.5.3.3 PS Concrete Compressive Stress	✓
68.5.3.3 PS Concrete Tensile Stress	✓
68.5.3.3 PS Flexure Rating	✓
68.5.3.3 PS Moment Capacity	⊞
68.5.3.3 PS Steel Tensile Stress	✓
8.16.2.7 Design Assumptions	⊞
9.15.2.3 Concrete - Cracking Stress	⊞
