ITD Over-legal Permitting Journey

Since we built bridge to 1990's:

- Check heavy trucks over trouble bridges.

ITD Over-legal Permitting Journey

1990's to 2021 - DMV screens by factor to determine which permits need bridge analysis.

Weekly Average 4 years ago:

- 200 permits.
- 20 w/bridge analysis.
- 4 over 250k.
- Around 160 models run.
- Bridge Hours 60-80 a week.

ITD Over-legal Permitting Journey

2021- Current. Full bridge analysis and self issue permits takes about 5 minutes.

Current weekly average:

- 450 permits/week

- Faster
- Conservative
- Set it and forget it

Analysis Based

- Slower
- More effort on data
- Less restrictions

Truck Factors / Bridge Factors

- Quick screening tool for Bridge Capacity and Truck Loads
 - Combines axle weights and spacing
- At ITD the truck factor is based on Federal Formula B

$$w = 500 \left(\frac{\ell n}{n - 1} + 12n + 36 \right)$$

- w = the maximum weight in pounds that can be carried on a group of two or more axles to the nearest 500 pounds (230 kg).
- ℓ = spacing in feet between the outer axles of any two or more consecutive axles.
- n = number of axles being considered.

- Factor developed for all axle groupings use highest

Bridge Factors

Bridge Factor is based on Rating Factors for Legal trucks

History of Load Rating Tool

- AASHTOWare BrR
 - Too slow for permitting - ratings take 5+ minutes for each bridge
- Load Rating Tool
 - Uses pre-processed influence lines to quickly determine rating - 100 ratings / second
 - Began upgrade to BrR 10 years ago
 - First included in 6.8.2 with limited capabilities
 - 7.2 includes LRFR

Data Updates

- ITD updates bridge and load rating information quarterly
 - Backup of BrR database
 - Zip file of Load Rating Tool files
 - Spreadsheet with inventory information
- Able to make emergency changes via 511 restrictions system
- Can update bridge models and inventory information in between but testing is cumbersome

Data Testing

- 1) 121k Test - Run the 121k Truck over all State bridges through system. Match rating method and Operating Rating result.
- 2) 240k Test - Run the 240k Truck over all State bridges through system. Match speed and lane requirements
- 3) Side by Side (QA) - Run permits manually and make sure they match bridges on route, ratings, and requirements.

System Monitoring

- Real Time monitoring for error bridges. Bridge where results are expected but system returns none.
- Monitoring of Failed and Manual results for bridges that are causing problems
