

## Bridge Parameters XML Version Conversion Issue

Applies to the following products:

- BrD/BrR/BrDR, version 7.7

### Description

During the XML version conversion for bridges imported into version 7.7, bridge parameter information on the “*Description (cont’d)*” tab of the Bridge Description window is not imported (see below). This behavior *only* occurs during the XML version conversion while importing a bridge. The behavior does **not** occur during a database migration.

## Resolution

Install the 7.7.1.3001 patched version to correct this behavior. If you have not yet updated to 7.7.0.3001, install the latest 7.7.1.3001 version. You do not need to first install 7.7.0.3001.

## Status

Version 7.7.1.3001 corrects this behavior. The behavior will also be correct in upcoming versions (7.8 and forward). **Bridges that were imported with version 7.7.0.3001 need to be reviewed for accuracy.** To correct any missing data, the bridge can either be re-imported with version 7.7.1.3001, or the missing data can be manually set on the bridge.
